

Product ID: Flexible Metal Filler

Product Name: ALSIFLEX

Quantity: 1 litre (12 per case)

ALSIFLEX - Flexible metal filler

Flexible and shock resistant filler

Used by major manufacturers to repair aluminium hulls of boats this filler is special because it is light and strong. It is also used in many other applications such as on cars, RV's and trucks. In spite of being able to repair surfaces, which are very thin and vulnerable to shock Alsiflex will not crack, shrink or absorb moisture.

- Can be used on all metals including galvanized sheet iron plates and aluminium
- Will not crack or break on impact
- Will not shrink
- Will not absorb moisture
- Can be used with hammer & anvil without the risk of cracking or peeling
- Can be easily sanded wet or dry
- Offers a non-porous smooth surface, which can be applied in 1 single application
- Light weight and strong.
- Used for repairing large surfaces (Surfaces which are made of very thin metal & are vulnerable to shock)

Applications:

Used for repairing large surfaces in cars, trucks, aluminium boats, roofs, door panels, bonnets, boot lids, etc. Can be used on any metal and some plastic surfaces that require flexibility and that will not absorb moisture.
