

Product ID: Wall Dust Control

Product Name: ALSIONV

Quantity: 1 litre / 5 litres

ALSION V – Wall dust control

Attracts dust to walls and away from paint surface

Alsion V is a product that is not an antistatic, but a static that attracts dust to the walls thereby reducing dust in the air. It helps give a better finish to painted surfaces due the reduction of dust particles in the air as well as reduces your labour (less sanding and polishing required due to less imperfections on surfaces) and improves the air and your health.

- Alsion V creates an ionic reaction, which attracts plastics, wood, mineral or other dust to the paint booth walls.
- When sprayed on the walls it triggers a very strong ionic reaction that neutralizes the electrostatic mechanism of dust.
- Alsion V protects the walls from paint fog.
- Alsion V is a silicone free product.

Applications:

Automotive paint spray booths, lacquer shops, work garages, wood working areas, machine tool shops, plastic manufacturing facilities, plastic cutting areas and many other industrial applications where sanding, cutting, varnishing and dust are a problem
