**Product name: Varibond**  
**Qty: Aerosols/Quarts/Gallons/Drums**

## **VARIBOND® - The only real limitation is the imagination**

Varibond is the original, solvent based color coating for hard plastics. Quite uniquely Varibond forms a chemical bond with the substrate. Varibond cannot be removed and will not crack, peel or flake. Varibond is the only product on the market that can color plastic windows even in dark colors and will not fade or lose color for 10 years.

Unlike Varikote, Varibond with its different formulation will also take to GRP (glass fibre) bonding in a way that is impossible for cellulose paints. This makes it ideal for GRP spoilers and body kits

VARIBOND is:

- The Original
- Colorfast
- UV resistant
- Penetrates surface and bonds to the PVC-U substrate (Not simply a surface adhesion)
- Abrasion Resistant
- Available in any color you want
- Available in Gloss, Satin or Matt
- Available in Metallic, Wood grain, Pearl, Fluorescent, Luminescent, Interference and Marble finishes
- Available in Clear and Opaque
- Guaranteed for 10 years
- Proven for more than 10 years
- Leaves surface looking original & not painted
- Leaves the original grain pattern intact & visible
- With the help of our Plastikprep primer, you can now color polypropylene & EPDM plastics with Varibond
- Only sold as VARIBOND®

### Applications:

Varibond can be used to coat PVC, ABS and many other hard plastics. It can also be used on powder-coated aluminium and may be applied to both virgin and recycled material.

Also suitable for domestic, commercial and architectural applications for new-build or refurbished projects. Used in coloring doors, windows, conservatories and other building components

Great for coloring or recoloring bumpers, plastic trims (inside as well as outside) on cars, boats, planes and RV's

Can also be used to color computers, telephones, photocopy machines, faxes, etc.

Varibond is also suitable for sign writing, shop fitting and other similar applications.
