VARIKOTE - Color for vinyl, soft plastics and carpets

Have you ever used a product that claims to be a dye to recolor vinyl or plastics and found that it peeled, cracked or chipped off?

Most professionals and do it your selfers have run into this problem at one time or another. Varikote is unique because it is a dye and not paint. Most other products that are being used for recoloring vinyl or plastics are paints and will peel, crack, or chip off. We supply Varikote to OEM, repair specialists and do it your selfers all over the world and have a complete mixing system for the professional with color charts and formulas to mix all the RAL colors on our chart. Please feel free to contact us for additional details.
